

CHUBB LIFE ASSURANCE PUBLIC COMPANY LIMITED

INTERIM FINANCIAL INFORMATION (UNAUDITED)

30 SEPTEMBER 2025

AUDITOR'S REPORT ON REVIEW OF INTERIM FINANCIAL INFORMATION

To the Board of Directors of Chubb Life Assurance Public Company Limited

I have reviewed the interim financial information of Chubb Life Assurance Public Company Limited, which comprises the statement of financial position as at 30 September 2025, the related statements of comprehensive income for the three-month and nine-month periods then ended, changes in equity, and cash flows for the nine-month period then ended, and the condensed notes to the interim financial information. Management is responsible for the preparation and presentation of this interim financial information in accordance with Thai Accounting Standard 34, "Interim Financial Reporting". My responsibility is to express a conclusion on this interim financial information based on my review.

Scope of review

I conducted my review in accordance with Thai Standard on Review Engagements 2410, "Review of interim financial information performed by the independent auditor of the entity". A review of interim financial information consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Thai Standards on Auditing and consequently does not enable me to obtain assurance that I would become aware of all significant matters that might be identified in an audit. Accordingly, I do not express an audit opinion.

Conclusion

Based on my review, nothing has come to my attention that causes me to believe that the accompanying interim financial information is not prepared, in all material respects, in accordance with Thai Accounting Standard 34, "Interim Financial Reporting".

The accompanying condensed notes to interim financial information are an integral part of these interim financial information.

1 General information

Chubb Life Assurance Public Company Limited ("the Company") was registered as a limited company under the law of Thailand on 23 June 1997. The Company was converted to a public company limited and registered with the Ministry of Commerce on 16 October 2012.

The address of its registered office is as follows:

21st and 22nd floor, 130 - 132 Sindhorn Tower 3, Wireless Road, Lumpini, Pathumwan, Bangkok 10330.

The principal business operation of the Company is to provide life insurance.

The major shareholder of the Company is Eksupsiri Company Limited, which was incorporated in Thailand, holding 75% of shares. The ultimate parent is Chubb Limited, which is incorporated in Switzerland.

The interim financial information was authorised for issue by the Board of Directors on 12 November 2025.

The interim financial information has been reviewed but not audited.

2 Basis of preparation

The interim financial information has been prepared in accordance with Thai Accounting Standard (TAS) 34 *Interim Financial Reporting*. The primary financial information (statement of financial position, statement of comprehensive income, statement of changes in equity and statement of cash flows) is presented in a format consistent with the annual financial statements complying with TAS 1 *Presentation of Financial Statements*. In addition, the interim financial information presentation is based on the formats of life insurance interim financial information attached in an Office of Insurance Commission's notification "Principle, methodology, condition and timing for preparation, submission and reporting of financial statements and operation performance for life insurance company B.E. 2566" dated 8 February 2023 ("OIC Notification") and additional information are disclosed to the condensed notes to the interim financial information as required by the OIC Notification.

The interim financial information should be read in conjunction with the annual financial statements for the year ended 31 December 2024.

An English version of the interim financial information has been prepared from the interim financial information that is in the Thai language. In the event of a conflict or a difference in interpretation between the two languages, the Thai language interim financial information shall prevail.

Costs that are incurred unevenly during the financial year are anticipated or deferred in the interim report only if it would also be appropriate to anticipate or defer such costs at the end of the financial year.

Taxes on income in the interim periods are accrued using the tax rate that would be applicable to expected total annual profit or loss.

3 Accounting policies, new and amended financial reporting standards

3.1 Accounting policies

The accounting policies used in the preparation of the interim financial information are consistent with those used in the financial statements for the year ended 31 December 2024, except for the adoption of the new financial reporting standards, which has been disclosed in Note 4.

3.2 New financial reporting standard that is effective for the accounting period beginning on or after 1 January 2025 which is relevant to and has significant impacts on the Company

IFRS 17 Insurance Contracts IFRS 17 has replaced IFRS 4 Insurance Contracts which has been effective for accounting periods beginning since or after 1 January 2025.

It requires a current measurement model where estimates are remeasured in each reporting period. Contracts are measured using the building blocks of:

- discounted probability-weighted cash flows
- an explicit risk adjustment, and
- a contractual service margin (CSM) representing the unearned profit of the contract which is recognised as revenue over the coverage period.

The standard allows a choice between recognising changes in discount rates either in the statement of profit or loss or directly in other comprehensive income. The choice is likely to reflect how insurers account for their financial assets under IFRS 9.

An optional, simplified premium allocation approach is permitted for the liability for the remaining coverage for an eligible portfolio of insurance contracts, which are often written by non-life insurers. There is a modification of the general measurement model called the 'variable fee approach' for certain contracts written by life insurers where policyholders share in the returns from underlying items. When applying the variable fee approach, the Company's share of the fair value changes of the underlying items is included in the CSM. The results of insurers using this model are therefore likely to be less volatile than under the general model.

Adopting IFRS 17, the Company can choose to recognise any cumulative negative impacts from insurance contract liabilities in retained earnings by applying the straight-line method, using no more than a three-year period from the transition date.

The new rules will affect the financial statements and key performance indicators of all companies that issue insurance contracts or investment contracts with discretionary participation features.

The impact from the first-time adoption of IFRS 17 has been disclosed in Note 4.

4 Initial application of the new financial reporting standards

4.1 New accounting policies from the initial adoption of new reporting standards

4.1.1 Insurance contracts and reinsurance contracts

a) Measurement

According to TFRS 17, there are three measurement models. Insurance contracts

- with direct participation features (DPF) are measured under with the Variable Fee Approach (VFA); or
- without direct participation features (DPF) are measured under the General Measurement Model (GMM); or
- without direct participation features can be measured under the Premium Allocation Approach (PAA), if selected instead of GMM and eligibility criteria are fulfilled.

The Company generally applies the same accounting policies to reinsurance contracts held as to insurance contracts issued.

For the measurement of a portfolio of reinsurance contracts held, the Company applies the same accounting policies as insurance contracts issued without direct participation features, with following adjustments:

The estimates of the present value of future cash flows are measured using assumptions that are consistent with those used to measure the estimates of the present value of future cash flows for the underlying insurance contracts, with an adjustment for any risk of non performance by the reinsurer. The effect of the non-performance risk of the reinsurer is assessed at each reporting date and the effect of changes in the non-performance risk is recognised in profit or loss.

b) Classification

Insurance contracts are classified as contracts with direct participating features (DPF) or contracts without direct participation features. The classification of insurance contracts forms the basis for the measurement model applied. Direct participating contracts are contracts for which, at inception:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the Company expects to pay the policyholder an amount equal to a substantial share of the fair value returns on the underlying items; and
- the Company expects a substantial proportion of any change in the amounts to be paid to the policyholder to vary with the change in fair value of the underlying items.

The Company uses judgement to assess whether the amounts expected to be paid to the policyholder constitute a substantial share of the fair value returns on the underlying items.

The Company's products can be classified as follows.

Product type	Measurement model
• Non-participating life insurance	General Measurement Model
• Annuity	General Measurement Model
• Personal accident	General Measurement Model

c) Level of aggregation

To allocate individual insurance contracts to a portfolio of contracts, the Company first defines portfolios which include contracts with similar risks that are managed together. These portfolios are subdivided into portfolios of contracts on the basis of profitability and annual cohorts which are:

- contracts that are onerous at initial recognition;
- contracts that at initial recognition have no significant possibility of becoming onerous subsequently; and
- a portfolio of remaining contracts.

d) Recognition and derecognition

Portfolios of insurance contracts issued are initially recognised from the earliest of the following:

- the beginning of the coverage period;
- the date when the first payment from the policyholder is due or actually received, if there is no due date; and
- when the Company determines that a portfolio of contracts becomes onerous.

Reinsurance contracts held are recognised as follows:

- a portfolio of reinsurance contracts held that provide proportionate coverage (quota share reinsurance) is recognised at the later of:
 - the beginning of the coverage period of the Company; and
 - the initial recognition of any underlying insurance contract;
- all other portfolios of reinsurance contracts held are recognised from the beginning of the coverage period of the reinsurance contracts held; unless the Company entered into the reinsurance contract held at or before the date when an onerous portfolio of underlying contracts is recognised prior to the beginning of the coverage period of the reinsurance contracts held, in which case the reinsurance contract held is recognised at the same time as the underlying insurance contracts is recognised.

e) Accounting for contract modification and derecognition

The Company derecognises a contract when it is extinguished or its terms are modified in a way that would have changed the accounting for the contract significantly had the new terms always existed, in which case a new contract based on the modified terms is recognised. If a contract modification does not result in derecognition, then the Company treats the changes in cash flows caused by the modification as changes in estimates of fulfilment cash flows.

f) Fulfilment cash flows within contract boundary

The fulfilment cash flows represent the risk adjusted present value of the Company's rights and obligations to the policyholders, comprising the estimates of expected future cash flows, discounting, and an explicit risk adjustment for non-financial risk. The estimates of future cash flows comprise all cash flows expected to arise as the insurance contract is fulfilled with an adjustment to reflect the time value of money and the financial risks related to future cash flows. In estimating these future cash flows, the Company incorporates, in an unbiased way, all reasonable and supportable information that is available without undue cost or effort at the reporting date. The Company performs regular expense studies and uses judgement to determine the extent to which fixed and variable overheads are directly attributable to fulfilling insurance contracts. Cash flows within the boundary of a contract relate directly to the fulfilment of the contract, including those for which the Company has discretion over the amount or timing. These include premiums from policyholders, payments to (or on behalf of) policyholders, insurance acquisition cash flows, and other costs incurred in fulfilling the contracts.

g) Contract boundary

The Company uses the concept of contract boundary to determine what cash flows should be considered in the measurement of portfolios of insurance contracts.

Cash flows are within the boundary of an insurance contract if they arise from the rights and obligations that exist during the period in which the policyholder is obligated to pay premiums or the Company has a substantive obligation to provide the policyholder with insurance contract services. A substantive obligation ends when:

- a) the Company has the practical ability to reassess the risks of and reprice the particular policyholder or change the level of benefits so that the price fully reflects those risks; or
- b) both of the following criteria are satisfied:
 - i. the Company has the practical ability to reprice the contract or a portfolio of contracts so that the price fully reflects the reassessed risk of that portfolio; and
 - ii. the pricing of premiums up to the date when risks are reassessed does not reflect the risks related to periods beyond the reassessment date.

Riders, representing add-on provisions to a basic insurance policy that provide additional benefits to the policyholder at additional cost, that are issued together with the main insurance contracts form part of a single insurance contract with all of the cash flows within its boundary.

Cash flows outside the insurance contracts boundary relate to future insurance contracts and are recognised when those contracts meet the recognition criteria.

Cash flows are within the boundaries of investment contracts with DPF if they result from a substantive obligation of the Company to deliver cash at a present or future date.

For portfolios of reinsurance contracts held, cash flows are within the contract boundary if they arise from substantive rights and obligations of the Company that exist during the reporting period in which the Company is compelled to pay amounts to the reinsurer or in which the Company has a substantive right to receive insurance contract services from the reinsurer.

Quota share reinsurance contracts held by the Company are indefinite. However, for new underlying contracts, either party can terminate them on ninety days' notice. The Company, therefore considers such reinsurance contracts as continuation of the underlying contracts issued within ninety days. Estimation of future cash flows arising from all underlying contracts issued and expected to be issued within the ninety-day limit are included in the measurement of the reinsurance contracts.

Excess of loss reinsurance contracts held by the Company provide coverage for claims incurred during the accident year, and therefore all cash flows arising from claims incurred and expected to incur during the accident year are included in the measurement of the reinsurance contracts. This includes mandatory or voluntary reinstatement premiums that meet the requirements of the contracts which therefore are within the scope of the relevant reinsurance contracts.

h) Insurance acquisition costs

Insurance acquisition cash flows arise from the activities of selling, underwriting and starting a portfolio of contracts that are directly attributable to the portfolio of contracts to which the portfolio belongs. Insurance acquisition cash flows are allocated to portfolios of insurance contracts on a systematic and rational basis. Insurance acquisition cash flows that are directly attributable to the portfolio of insurance contracts are allocated:

- a) to that portfolio; and
- b) to portfolios that will include insurance contracts that are expected to arise from renewals of the insurance contracts in that portfolio.

Insurance acquisition cash flows not directly attributable to a group of contracts but directly attributable to a portfolio of contracts are allocated to groups of contracts in the portfolio or expected to be in the portfolio.

Cash flows used to acquire insurance coverage that occur before the recognition of the related portfolio of contracts are recognised as an asset. Such asset is to be allocated to and recognised in each portfolios that share insurance acquisition costs. The asset is to be derecognised entirely or partially when the cash flows used to acquire insurance coverage are incorporated into the measurement of the related portfolio of contracts.

For unallocated acquisition cash flows, the Company is required to assess recoverability. Under any certain circumstances, if there is any indication that the asset might be impaired, the impairment loss will reduce the carrying amount of the assets. This loss is recognised as insurance service expenses. The previous impairment loss recognition is to be reversed, equivalent to impairment indicator no longer existed or have been improved.

The recoverability assessment is performed in two steps, as follows:

1. The Company must recognise impairment losses in profit or loss and reduce the carrying amount of the insurance acquisition cash flow assets, so that the carrying amount of this asset does not exceed the expected net cash inflows for the related portfolio of insurance contracts.
2. Additionally, when the Company allocates insurance acquisition cash flows to the group of contracts expected to arise from the renewal of insurance contracts within that portfolio, these cash flows should not exceed the anticipated net cash inflows for the expected renewals. This amount is determined based on the cash flow expected to be received at the initial recognition of the expected renewal. An impairment loss will be recognized for any excess amount that was not recognized in step (1) above.

Cash flows that are not directly attributable to a group of insurance contracts, such as some advertisement and consultant costs, are recognised in other operating expenses as incurred.

i) Risk adjustment for non-financial risk

The risk adjustment reflects the compensation an entity would require for bearing non-financial risks, i.e., the uncertainty of cash flows that arise from insurance contracts, other than the uncertainty arising from financial risks. Such non-financial risks include insurance risks, lapse and expense risk. The Company applies a confidence level approach.

j) Contracts not measured under PAA

Initial measurement

On initial recognition, the Company measures a portfolio of contracts as the total of:

- a) the fulfilment cash flows, which comprise estimates of future cash flows, an adjustment to reflect time value of money and associated financial risks, and a risk adjustment for non-financial risk; and
- b) the contractual service margin (CSM).

Contractual service margin

The CSM is a component of the carrying amount of the asset or liability for a portfolio of insurance contracts issued representing the unearned profit that the Company will recognise as it provides insurance contract services in the future.

At initial recognition, the CSM is an amount that results in no income or expenses (unless a portfolio of contracts is onerous, or insurance revenue and insurance service expenses are recognised as in (d) below) arising from:

- a. the initial recognition of the FCF;
- b. cash flows arising from the contracts in the portfolio at that date;
- c. the derecognition of any insurance acquisition cash flows asset; and
- d. the derecognition of any other pre-recognition cash flows. Insurance revenue and insurance service expenses are recognised immediately for any such assets derecognised.

When the above calculation results in a net outflow, the portfolio of insurance contracts issued is onerous. A loss from onerous insurance contracts is recognised in profit or loss immediately, with no CSM recognised on the statement of financial position on initial recognition, and a loss component is established in the amount of loss recognised.

For portfolios of reinsurance contracts held, any net gain or cost at initial recognition is recognised as the CSM unless the net cost of purchasing reinsurance relates to past events, in which case the Company recognises the net cost immediately in profit or loss.

For reinsurance contracts held, the CSM represents a deferred gain or loss that the Company will recognise as a reinsurance expense as it receives insurance contract services from the reinsurer in the future and is calculated as the sum of:

- a. the initial recognition of the FCF; and
- b. cash flows arising from the contracts in the portfolio on that date.
- c. the amount derecognised at the date of initial recognition of any asset or liability previously recognised for cash flows related to the portfolio of reinsurance contracts held (other pre-recognition cash flows); and
- d. any income recognised in profit or loss when the entity recognises a loss on initial recognition of an onerous portfolio of underlying insurance contracts or in addition of onerous underlying insurance contracts to that portfolio.

A loss-recovery component is established or adjusted within the remaining coverage for reinsurance contracts held for the amount of income recognised in (d) above. This amount is calculated by multiplying the loss recognised on the underlying insurance contracts by the percentage of claims on underlying insurance contracts that the Company expects to recover from the reinsurance contracts held that are entered into before or at the same time as the loss is recognised on the underlying insurance contracts.

When underlying insurance contracts are included in the same portfolio with insurance contracts issued that are not reinsured, the Company applies a systematic and rational method of allocation to determine the portion of losses that relates to underlying insurance contracts.

Subsequent measurement

At subsequent measurement, the CSM gets adjusted for changes in cash flows related to future services and for the interest accretion at interest rates locked in at initial recognition of the portfolio of contracts. A release from the CSM is recognised in profit or loss each period to reflect the services provided in that period based on "coverage units".

The carrying amount at the end of each reporting period of a portfolio of insurance contracts held is the sum of:

- a. the liability for remaining coverage, comprising:
 - i. the FCF related to future service allocated to the portfolio at that date; and
 - ii. the CSM of the portfolio at that date; and
- b. the liability for incurred claims, comprising the FCF related to past service allocated to the portfolio at the reporting date

Changes in fulfilment cash flows

The FCF are updated by the Company for current assumptions at the end of every reporting period, using the current estimates of the amount, timing and uncertainty of future cash flows and of discount rates.

The way in which the changes in estimates of the FCF are treated depends on which estimate is being updated:

- a. changes that relate to current or past service are recognised in profit or loss; and
- b. changes that relate to future service are recognised by adjusting the CSM or the loss component within the LRC.

For insurance contracts under the GMM, the following adjustments relate to future service and thus adjust the CSM:

- a. experience adjustments - arising from premiums received in the period that relate to future service and related cash flows such as insurance acquisition cash flows and premium-based taxes;
- b. changes in estimates of the present value of future cash flows in the LRC, except those described in the following item;
- c. differences between any investment component expected to become payable in the period and the actual investment component that becomes payable in the period, determined by comparing (i) the actual investment component that becomes payable in a period with (ii) the payment in the period that was expected at the start of the period plus any insurance finance income or expenses related to that expected payment before it becomes payable; and
- d. changes in the risk adjustment for non-financial risk that relate to future service.

Adjustments (a), (b) and (d) above are measured using discount rates determined on initial recognition (the locked-in discount rates).

For insurance contracts under the GMM, the following adjustments do not adjust the CSM:

- a. changes in the FCF for the effect of the time value of money and the effect of financial risk and changes thereof;
- b. changes in the FCF relating to the LIC;
- c. experience adjustments - arising from premiums received in the period that do not relate to future service and related cash flows, such as insurance acquisition cash flows and premium-based taxes; and
- d. experience adjustments relating to insurance service expenses (excluding insurance acquisition cash flows)

For insurance contracts under the VFA, the following adjustments relate to future service and thus adjust the CSM:

- a. changes in the amount of the Company's share of the fair value of the underlying items; and
- b. changes in the FCF that do not vary based on the returns of underlying items:
 - i. changes in the effect of the time value of money and financial risks including the effect of financial guarantees;
 - ii. experience adjustments arising from premiums received in the period that relate to future service and related cash flows, such as insurance acquisition cash flows and premium-based taxes;
 - iii. changes in estimates of the present value of future cash flows in the LRC, except those described in the following paragraph;
 - iv. differences between any investment component expected to become payable in the period and the actual investment component that becomes payable in the period, determined by comparing (i) the actual investment component that becomes payable in a period with (ii) the payment in the period that was expected at the start of the period plus any insurance finance income or expenses related to that expected payment before it becomes payable; and
 - v. changes in the risk adjustment for non-financial risk that relate to future service.

Adjustments (ii)-(v) are measured using the current discount rates.

For insurance contracts under the VFA, the following adjustments do not adjust the CSM:

- a. changes in the obligation to pay the policyholder the amount equal to the fair value of the underlying items;
- b. changes in the FCF that do not vary based on the returns of underlying items:
 - i. changes in the FCF relating to the LIC; and
 - ii. experience adjustments arising from premiums received in the period that do not relate to future service and related cash flows, such as insurance acquisition cash flows and premium-based taxes; and
 - iii. experience adjustments relating to insurance service expenses (excluding insurance acquisition cash flows).

The Company does not have any products with complex guarantees and does not use derivatives as economic hedges of the risks.

Changes to the contractual service margin

For insurance contracts issued, at the end of each reporting period the carrying amount of the CSM is adjusted by the Company to reflect the effect of the following changes:

- a. The effect of any new contracts added to the portfolio.
- b. For contracts measured under the GMM, interest accreted on the carrying amount of the CSM.
- c. Changes in the FCF relating to future service are recognised by adjusting the CSM. Changes in the FCF are recognised in the CSM to the extent that the CSM is available. When an increase in the FCF exceeds the carrying amount of the CSM, the CSM is reduced to zero, the excess is recognised in insurance service expenses and a loss component is recognised within the LRC. When the CSM is zero, changes in the FCF adjust the loss component within the LRC with correspondence to insurance service expenses. The excess of any decrease in the FCF over the loss component reduces the loss component to zero and reinstates the CSM.
- d. The effect of any currency exchange differences.
- e. The amount recognised as insurance revenue for insurance contract services provided during the period, determined after all other adjustments above.

The Company has made an accounting policy choice to apply the year-to-date approach for the accounting for insurance contracts. Therefore, the treatment of accounting estimates under TFRS 17 will be applied prospectively and does not affect financial statement reported in previous reporting period.

For reinsurance contracts held, at the end of each reporting period, the carrying amount of the CSM is adjusted by the Company to reflect the effect of the following changes:

- a. The effect of any new contracts added to the portfolio.
- b. Interest accreted on the carrying amount of the CSM.
- c. Income recognised in profit or loss when the entity recognises a loss on initial recognition of an onerous portfolio of underlying insurance contracts or on addition of onerous underlying insurance contracts to that portfolio. A loss-recovery component is established or adjusted within the remaining coverage for reinsurance contracts held for the amount of income recognised.
- d. Reversals of a loss-recovery component other than changes in the FCF of reinsurance contracts held.
- e. Changes in the FCF, to the extent that the change relates to future service, unless the change results from a change in FCF allocated to a portfolio of underlying insurance contracts that does not adjust the CSM for the portfolio of underlying insurance contracts.
- f. The effect of any currency exchange differences.
- g. The amount recognised in profit or loss for insurance contract services received during the period, determined after all other adjustments above.

Income referred to in (c) above is calculated by multiplying the loss recognised on underlying insurance contracts by the percentage of claims on underlying insurance contracts that the Company expects to recover from the reinsurance contract held that is entered into before or at the same time as the loss is recognised on the underlying insurance contracts.

For the purposes of (c)–(e) above, when underlying insurance contracts are included in the same portfolio with insurance contracts issued that are not reinsured, the Company applies a systematic and rational method of allocation to determine the portion of losses that relates to underlying insurance contracts.

The Company does not have any reinsurance contracts held measured under the GMM with underlying contracts measured under the PAA.

Interest accretion on the CSM

Under the GMM, interest accretion on the CSM is calculated using locked-in rate determined at initial recognition applied to specified cash flows that are not variable based on the return on the underlying item. When new contracts are added to the portfolio in subsequent reporting periods, the discount curve will be updated by applying a weighted-average discount rate over the period in which the contracts in portfolio are recognised. The weighted-average discount curve is calculated by multiplying the contractual service margin of the new contracts by the corresponding discount curve and dividing it by the total contractual service margin of the portfolio.

Adjusting the CSM for changes in the FCF relating to future service

The CSM is adjusted for changes in the FCF, measured applying the discount rates as specified in the Changes in fulfilment cash flows section above.

Release of the CSM to profit or loss

The amount of the CSM recognised in profit or loss for insurance contract services in the period is determined by the allocation of the CSM remaining at the end of the reporting period over the current and remaining expected coverage period of the portfolio of insurance contracts based on coverage units.

The coverage period is defined as a period during which the entity provides insurance contract services. Insurance contract services include coverage for an insured event (insurance coverage), the generation of an investment return for the policyholder, if applicable (investment-return service) for the contracts under the GMM, and the management of underlying items on behalf of the policyholder (investment-related service) for the contracts under the VFA. The period of investment-return service or investment-related service ends at or before the date when all amounts due to current policyholders relating to those services have been paid. Investment-return services are provided only when an investment component exists in insurance contracts or the policyholder has a right to withdraw an amount, and the Company expects these amounts to include an investment return that is achieved by the Company by performing investment activities to generate that investment return.

For contracts issued, the Company determines the coverage period for the CSM recognition as follows:

- a. for direct participating contracts, insurance coverage period is within the period of investment-related services and, thus, the coverage period is determined by the period in which investment-related services are expected to be provided;
- b. for term life insurance contracts, no investment-return services are provided and, thus, the coverage period is determined by insurance coverage.

The total number of coverage units in a portfolio is the quantity of service provided by the contracts in the portfolio over the expected coverage period. The coverage units are determined at each reporting period-end prospectively by considering:

- a. the quantity of benefits provided by contracts in the portfolio;
- b. the expected coverage period of contracts in the portfolio; and
- c. the likelihood of insured events occurring, only to the extent that they affect the expected coverage period of contracts in the portfolio.

The Company uses the amount that it expects the policyholder to be able to validly claim in each period if an insured event occurs as the basis for the quantity of benefits with respect to insurance coverage. For investment-return and investment-related services, policyholders' account values are used to determine the quantity of benefits provided.

The Company determines coverage units as follows:

- a. for term life insurance contracts, coverage units are determined based on the policies' face values that are equal to the fixed death benefit amounts;
- b. for direct participating contracts, coverage units are determined based on the quantity of benefits provided by the fixed death benefit amounts and the policyholders' account values, weighted according to the expected present value of the future cash outflows for each service;

The Company reflects the time value of money in the allocation of the CSM to coverage units, using discount rates determined at initial recognition that are applied to nominal cash flows that do not vary based on the returns of underlying items,

For reinsurance contracts held, the CSM is released to profit or loss as insurance contract services are received from the reinsurer in the period.

Coverage units for the proportionate term life reinsurance contracts held are based on the insurance coverage provided by the reinsurer, and they are determined by the ceded policies' fixed face values, taking into account new business projected within the reinsurance contract boundary.

The coverage period for these contracts is determined based on the coverage period of all underlying contracts whose cash flows are included in the reinsurance contract boundary.

Onerous contracts - Loss component

When adjustments to the CSM exceed the amount of the CSM, the portfolio of contracts becomes onerous and the Company recognises the excess in insurance service expenses, and it records the excess as a loss component of the LRC.

When a loss component exists, the Company allocates the following between the loss component and the LRC for the respective portfolio of contracts, based on the ratio of the loss component to the FCF relating to the expected future cash outflows:

- a. expected incurred claims and other directly attributable expenses for the period;
- b. changes in the risk adjustment for non-financial risk for the risk expired; and
- c. finance income (expenses) from insurance contracts issued.

The amounts of loss component allocation in (a) and (b) above reduce the respective components of insurance revenue and are reflected in insurance service expenses.

Decreases in the FCF relating to future service in subsequent periods reduce the remaining loss component and reinstate the CSM after the loss component is reduced to zero. Increases in the FCF relating to future service in subsequent periods increase the loss component.

Reinsurance contracts held - Loss-recovery component

A loss-recovery component is established or adjusted within the asset for remaining coverage for reinsurance contracts held for the amount of income recognised in profit or loss when the Company recognises a loss on initial recognition of an onerous portfolio of underlying insurance contracts or on addition of onerous underlying insurance contracts to that portfolio.

Subsequently, the loss-recovery component is adjusted to reflect changes in the loss component of an onerous portfolio of underlying insurance contracts. The loss-recovery component is further adjusted, if required, to ensure that it does not exceed the portion of the carrying amount of the loss component of the onerous portfolio of underlying insurance contracts that the Company expects to recover from the portfolio of reinsurance contracts held.

The loss-recovery component determines the amounts that are presented as a reduction of incurred claims recovery from reinsurance contracts held and are consequently excluded from the reinsurance expenses determination.

For insurance contracts issued, insurance acquisition cash flows allocated to a portfolio are deferred and recognised over the coverage period of contracts in a portfolio. For reinsurance contracts held, broker fees are recognised over the coverage period of contracts in a portfolio.

Initial measurement

For insurance contracts issued, on initial recognition, the Company measures the LRC at the amount of premiums received, less any acquisition cash flows paid and any amounts arising from the derecognition of the insurance acquisition cash flows asset and the derecognition of any other relevant pre-recognition cash flows.

For reinsurance contracts held, on initial recognition, the Company measures the remaining coverage at the amount of ceding premiums paid, plus broker fees paid to a party other than the reinsurer and any amounts arising from the derecognition of any other relevant pre-recognition cash flows.

The carrying amount of a portfolio of insurance contracts issued at the end of each reporting period is the sum of:

- a. the LRC; and
- b. the LIC, comprising the FCF related to past service allocated to the portfolio at the reporting date.

The carrying amount of a portfolio of reinsurance contracts held at the end of each reporting period is the sum of:

- a. the remaining coverage; and
- b. the incurred claims, comprising the FCF related to past service allocated to the portfolio at the reporting date.

Subsequent measurement

For insurance contracts issued, at each of the subsequent reporting dates, the LRC is:

- a. increased for premiums received in the period, excluding amounts that relate to premium receivables included in the LIC;
- b. decreased for insurance acquisition cash flows paid in the period;
- c. decreased for the amounts of expected premium receipts recognised as insurance revenue for the services provided in the period; and
- d. increased for the amortisation of insurance acquisition cash flows in the period recognised as insurance service expenses.

For reinsurance contracts held, at each of the subsequent reporting dates, the remaining coverage is:

- a. increased for ceding premiums paid in the period;
- b. increased for broker fees paid in the period; and
- c. decreased for the expected amounts of ceding premiums and broker fees recognised as reinsurance expenses for the services received in the period.

The Company adjusts liabilities for the remaining coverage for reinsurance contracts for the effects of time value of money, using a current discount rate.

The Company adjusts liabilities for the remaining coverage for reinsurance contracts held for the effect of the risk of reinsurer's inability to meet its performance obligation.

Subsequently, the loss component is remeasured at each reporting date as the difference between the amounts of the FCF determined under the GMM relating to the future service and the carrying amount of the LRC without the loss component.

Where applicable, resulting changes in the loss component are disaggregated between insurance service expenses and insurance finance income or expenses for the effect of the time value of money, financial risk and effect of changes therein.

The referred income is calculated by multiplying the loss recognised on underlying insurance contracts by the percentage of claims on underlying insurance contracts that the Company expects to recover from the reinsurance contract held that are entered into before or at the same time as the loss is recognised on the underlying insurance contracts.

When underlying insurance contracts are included in the same portfolio with insurance contracts issued that are not reinsured, the Company applies a systematic and rational method of allocation to determine the portion of losses that relates to underlying insurance contracts.

k) Insurance revenue

For contracts under the GMM or VFA, the insurance revenue is recognised as the Company provides services under portfolios of insurance contracts and the insurance revenue relating to services provided for each reporting period represents the total of the changes in the LRC that relate to services for which the Company expects to receive consideration, and comprises the following items:

- A release of the CSM, measured based on coverage units provided.
- Changes in the risk adjustment for non-financial risk relating to current services.
- Claims and other insurance service expenses incurred in the year, generally measured at the amounts expected at the beginning of the year, excluding amounts allocated to a potential loss component, repayments of investment components, insurance acquisition expenses, and amounts that relate to transaction-based taxes collected on behalf of third parties.
- Other amounts, including experience adjustments for premium receipts for current or past services.

l) Insurance service expenses

Insurance service expenses include the following:

- a. incurred claims and benefits, excluding investment components reduced by loss component allocations;
- b. other incurred directly attributable expenses, including amounts of any other pre-recognition cash flows assets (other than insurance acquisition cash flows) derecognised at the date of initial recognition;
- c. Amortisation of insurance acquisition cash flows is equal to the amount of insurance revenue recognised in the period that relates to recovering insurance acquisition cash flows.
- d. changes that relate to past service - changes in the FCF relating to the LIC; and
- e. changes that relate to future service - changes in the FCF that result in onerous contract losses or reversals of those losses; and
- f. insurance acquisition cash flows assets impairment, net of reversals.

m) Net income (expenses) from reinsurance contracts held

The Company presents financial performance of portfolios of reinsurance contracts held on a net basis in net income (expenses) from reinsurance contracts held, comprising the following amounts:

- a. reinsurance expenses;
- b. incurred claims recovery, excluding investment components reduced by loss-recovery component allocations;
- c. other incurred directly attributable expenses;
- d. changes that relate to past service – changes in the FCF relating to incurred claims recovery;
- e. effect of changes in the risk of reinsurers' non-performance; and
- f. amounts relating to accounting for onerous portfolios of underlying insurance contracts issued:
 - i. income on initial recognition of onerous underlying contracts;
 - ii. reinsurance contracts held under the GMM: reversals of a loss-recovery component other than changes in the FCF of reinsurance contracts held; and
 - iii. reinsurance contracts held under the GMM: changes in the FCF of reinsurance contracts held from onerous underlying contracts.

For portfolios of reinsurance contracts held measured under the GMM, reinsurance expenses comprise the following amounts relating to the changes in the remaining coverage:

- a. claims and other directly attributable expenses recovery in the period, measured at the amounts expected to be incurred at the beginning of the period, excluding:
 - amounts allocated to the loss-recovery component;
 - repayments of investment components; and
 - amounts related to the risk adjustment for non-financial risk;
- b. changes in the risk adjustment for non-financial risk, excluding:
 - changes included in finance income (expenses) from reinsurance contracts held;
 - changes that relate to future coverage (which adjust the CSM); and
 - amounts allocated to the loss-recovery component;
- c. amounts of the CSM recognised for the services received in the period; and
- d. experience adjustments - arising from premiums paid in the period other than those that relate to future service.

Ceding commissions that are not contingent on claims of the underlying contracts issued reduce ceding premiums and are accounted for as part of reinsurance expenses. Ceding commissions that are contingent on claims of the underlying contracts issued is part of incurred claims recovery.

n) Insurance finance income or expenses

Insurance finance income or expenses comprise the change in the carrying amount of the portfolio of insurance contracts arising from the effect of the time value of money and changes in the time value of money; and the effect of financial risk and changes in financial risk.

For the insurance contracts without direct participation features, the main amounts within insurance finance income or expenses are interest accreted on the FCF and the CSM; and the effect of changes in interest rates and other financial assumptions.

For the insurance contracts with direct participation features, insurance finance income or expenses comprise changes in the value of underlying items (excluding additions and withdrawals).

For contracts measured under GMM, the company represents the insurance finance income or expenses arising from the risk mitigation in separation; between profit or loss, and other comprehensive income (OCI), using a systematic allocation.

For the contracts measured using the VFA, the OCI option is applied. Since the Company holds the underlying items for these contracts, the use of the OCI option results in the elimination of accounting mismatches, with income or expenses included in profit or loss on the underlying assets held. The amount that exactly matches income or expenses recognised in profit or loss on underlying assets is included in finance income or expenses from insurance contracts issued. The remaining amount of finance income or expenses from insurance contracts issued for the period is recognised in OCI.

4.1.2 Financial assets

a) Recognition and derecognition

Regular way purchases, acquires and sales of financial assets are recognised on trade-date. Financial assets are derecognised when the rights to receive cash flows from the financial assets have expired or have been transferred and the Company has transferred substantially all the risks and rewards of ownership.

At initial recognition, the Company measures a financial asset at its fair value plus, in the case of a financial asset not at FVPL, transaction costs that are directly attributable to the acquisition of the financial asset. Transaction costs of financial assets carried at FVPL are expensed in profit or loss.

b) Classification and measurement

Debt instruments

The Company classifies its debt instrument financial assets depending on i) business model for managing the asset and ii) the cash flow characteristics of the asset whether they represent solely payments of principal and interest (SPPI).

There are three measurement categories into which the Company classifies its debt instruments:

- Amortised cost: Financial assets that are held for collection of contractual cash flows where those cash flows represent solely payments of principal and interest are measured at amortised cost. Interest income from these financial assets is included in investment income using the effective interest rate method. Any gain or loss arising on derecognition is recognised directly in profit or loss and presented in net gains or losses from financial assets. Impairment losses are presented as a separate line item in the statement of comprehensive income.
- Fair value through other comprehensive income (FVOCI): Financial assets that are held for i) collection of contractual cash flows; and ii) for selling the financial assets, where the assets' cash flows represent solely payments of principal and interest, are measured at FVOCI. Movements in the carrying amount are taken through other comprehensive income (OCI), except i) for the recognition of impairment losses (reversal), ii) interest income using the effective interest method, and iii) foreign exchange gains or losses which are recognised in profit or loss. When the financial assets is derecognised, the cumulative gain or loss previously recognised in OCI is reclassified from equity to profit or loss and presented in net gains or losses from financial instruments. Interest income presented in investment income. Impairment expenses are presented separately in the statement of comprehensive income.
- Fair value through profit or loss (FVPL): Financial assets that do not meet the criteria for amortised cost or FVOCI are measured at FVPL. A gain or loss on a debt investment that is subsequently measured at FVPL is recognised in profit or loss and presented net within fair value gains (losses) on financial instruments in the period in which it arises.

The Company reclassifies debt investments when and only when its business model for managing those assets changes.

Equity instruments

Except for equity instruments held for trading, which are measured at FVPL, the Company makes an irrevocable election at the time of initial recognition, classifying its equity instruments into two measurement categories.

- FVPL: the equity instruments are measured at fair value and changes in the fair value are recognised in fair value gains (losses) on financial instruments in the statement of comprehensive income.
- FVOCI: the equity instruments are measured at fair value and changes in the fair value are recognised in OCI. There is no subsequent reclassification of fair value gains and losses to profit or loss following the derecognition of the investment. Impairment losses (and reversal of impairment losses) are not reported separately from other changes in fair value.

Dividends from such investments (FVPL/FVOCI) continue to be recognised in profit or loss as investment income when the right to receive payments is established.

c) Impairment

The Company measures expected credit losses using the following methods

- a) Simplified approach: The company uses the simplified approach to calculate the allowance for expected credit losses, considering the expected credit losses over the lifetime for other receivables.
- b) General approach: For financial assets that are debt instruments measured at fair value through other comprehensive income and at amortized cost, the company uses the general approach according to TFRS 9 to measure expected credit losses. This approach requires consideration of expected losses within 12 months or over the asset's lifetime, depending on whether there has been a significant increase in credit risk. The company recognizes impairment losses from the initial recognition of such financial assets. The company assesses changes in the credit quality of financial assets in three stages, with each stage defining different methodologies for measuring impairment allowances and calculating effective interest rates, as follows:
 - Stage 1 When the credit risk of financial assets has not increased significantly relative to its initial recognition, allowance for expected credit losses is recognised equal to the credit losses expected from defaults occurring over the next 12 months.
 - Stage 2 When the credit risk of financial assets has increased significantly increase relative to its initial recognition, allowance for expected credit losses is recognised equal to the credit losses expected over the full lifetime of the asset.
 - Stage 3 When financial assets are considered to be credit-impaired, allowance for expected credit losses is recognised equal to the credit losses expected over the full lifetime of the asset.

The Company evaluates the credit risk of the financial assets at the end of each reporting period to determine whether there has been a significant increase since the initial recognition (comparing the risk of default as of the reporting date with the risk of default as of the initial recognition date).

The Company assesses expected credit loss by taking into consideration forward-looking information and past experiences. The expected credit loss is a probability-weighted present value of estimated cash shortfall. The cash shortfall is the difference between all contractual cash flows that are due to the Company and all cash flows expected to receive, discounted at the original effective interest rate.

When measuring expected credit losses, the Company reflects the following:

- probability-weighted estimated uncollectible amounts
- time value of money; and
- supportable and reasonable information as of the reporting date about past experience, current conditions and forecasts of future situations.

4.2 Impacts from initial application of the new financial reporting standards

This note explains the impact of the initial application of TFRS 17 Insurance Contracts, TFRS 7 Financial Instruments: Disclosure and TFRS 9 Financial Instruments on the Company's financial statements on 1 January 2025. The retrospective adjustments from changes in accounting policy applied from 1 January 2024 were disclosed in Note 4.1.

TFRS 7 Financial Instruments: Disclosure and TFRS 9 Financial Instruments are effective for the accounting period beginning on or after 1 January 2020. However, The Company passes criteria and elect to apply temporary exemption from the standards under TFRS 4 Insurance Contracts. The Company applies the 'Financial Instruments and Disclosure for Insurance Companies' accounting guidelines' ('The Accounting Guidance') for financial statement preparation for the prior period. On 1 January 2025, the Company has adopted TFRS 7 Financial Instruments: Disclosure and TFRS 9 Financial Instruments, with a corresponding of TFRS 17 Insurance Contracts, which is effective for the accounting period beginning on or after 1 January 2025.

The impact on retained earnings as of 1 January 2025 and 2024 from first-time adoption of new financial reporting standards are as follows:

	2025 Baht	2024 Baht
Unappropriated retained earnings (Deficits)

4.3 Financial instruments

As of 1 January 2024, there was no change in measurement and carrying amounts of financial assets and liabilities, but only a change in classification and presentation.

5 Estimates

The preparation of interim financial information requires management to make judgements, estimates and assumptions that affect the application of accounting policies. This may result in the difference between the actual amounts and the estimates of assets, liabilities, revenues and expenses.

In preparing the interim financial information, the significant judgements made by management in applying the Company's accounting policies and the key sources of estimation uncertainty were the same as those that applied to the financial statements for the year ended 31 December 2024, except for the estimates related to the TFRS17 Insurance contracts as follows:

5.1 Transition

These interim financial statements have been prepared in accordance with TFRS 17 Standards 17 using the fair value method at the transition date due to being impracticable in applying retrospectively. The entity has used supporting and reasonable information but has not been able to obtain the supporting and reasonable information necessary to apply the retrospective method and the modified retrospective method. Therefore, the entity applies the fair value method at the transition date.

In applying the fair value method, the Company determines contractual service margin or loss component of the liability for the remaining coverage at the transition date, equivalent to the difference between the fair value of the portfolio of insurance contracts at that date and the fulfilment cash flows measured at that date.

5.2 Estimates and Assumptions

a. Discount rate

The Company adjusts the future cash flows assumption to reflect the time value of money and the associated financial risks, to the extent that the financial risks are not included in the estimates of the cash flows. The discount rate used in the assumption of future cash flows is as follows.

- reflects the time value of money, the characteristics of the cash flows and the liquidity of the insurance contract,
- is consistent with the current observable market price (if any) of the financial instrument whose cash flows have similar characteristics to those of the insurance contract, for example in terms of timing, currency and liquidity, and
- excludes the effects of observable market prices, but do not affect the future cash flow of the insurance contract.

Insurance liabilities are calculated by applying a discount rate to expected future cash flows. For the discount rate, the Company uses a bottom-up approach using the risk free rate and liquidity to reflect the difference between the liquidity characteristics of the financial instrument referenced in the market and the liquidity characteristics of the insurance contract (illiquidity premium).

For the risk-free rate of return, the Company uses the reference yield of government bond.

The discount rates as of 30 September 2025, 31 December 2024 and 1 January 2024 are as follows.

Period (Year)	Discount rate (Percentage)					
	0.25	1	2	3	5	10
30 September 2025	2.30	2.28	2.19	2.22	2.25	2.46
31 December 2024	2.84	2.88	2.92	2.94	2.99	3.22
1 January 2024	2.95	3.22	3.19	3.20	3.30	3.57

b. Risk adjustment for non-financial risks

Risk adjustment for non-financial risks reflects the uncertainty of the liability for incurred claims and liability for remaining coverage. Non-financial risk adjustments which include insurance risk, lapse risk and expense risk are categorized by underwriting type, using the RBC Framework's volatility allowance (PAD) with a confidence level of 75 percentile for non-financial risk adjustments of which the resulting amount is higher than a confidence level of 75 percentile at the Company level.

Risk adjustment for non-financial risks as of 30 September 2025, 31 December 2024 and 1 January 2024 are as follows.

Product Group	Risk adjustment for non-financial risk (%)			
	LRC Shocked Scenario			LIC Shock
	Mortality and mobility	Lapse	Expense	
Whole life (non-participating)	+/-8	+/-15	2	+8 BaselBNR
Endowment (non-participating)	+/-8	+/-15	2	
Deferred annuities (non-participating)	+/-8	+/-15	2	
Term base (non-participating)	+/-8	+/-15	2	
Reduced paid-up insurance	+/-8	+/-15	2	
Extended term insurance	+/-8	+/-15	2	
Term rider	+/-8	+/-15	2	
Long term credit life (base)	+/-8	+/-15	2	
Long term credit life (riders)	+/-8	+/-15	2	
Premium benefit and waiver of premium rider	+/-8	+/-15	2	
Personal accident	+/-8	+/-15	2	+12 BaselBNR
Critical illness rider	+/-8	+/-15	2	
Accident rider	+/-8	+/-15	2	
Hospital benefit rider	+/-8	+/-15	2	
Health rider	+/-8	+/-15	2	
Group life yearly renewable term	+/-8	+/-15	2	+8 BaselBNR
Group personal accident and health coverage	+/-8	+/-15	2	+12 BaselBNR

c. Fulfilment Cash Flows

In measuring the value of an insurance contract, the Company calculates cash flows upon fulfilment as part of the contract value, which are an unbiased and explicit probability-weighted estimate (i.e. expected value) of the present value of future cash outflow, less the present value of future cash inflows that would occur if the Company fulfills the insurance contract, plus risk adjustments for non-financial risks.

d. Determination of coverage unit

Contractual service margin of the portfolio of insurance contracts is recognised as insurance income in each period based on the coverage unit provided during that period, which is determined by the volume of services, the expected period of coverage and the time value of money.

The volume of services under insurance contracts may include insurance coverage, return form investment management services and investment-related services, as applicable. In evaluating the services under insurance contracts, consideration is given to the terms and conditions and characteristics of the benefits of the contracts.

For contracts that mostly provide insurance coverage, the service volume is determined on a contract-by-contract basis based on the maximum expected policy benefit. For contracts that provide multiple services, the service volume is determined based on the policyholder's expected policy benefit from each service, with relative weight calculation applied using various factors.

The expected duration of coverage is calculated based on the probability that the insured event will occur to the extent that it affects the expected duration of the portfolio of insurance contracts. The determination of the expected duration of coverage is subject to judgment as it involves the estimation of the timing of the occurrence of the claim and the lapse of the policy.

6 Fair value

6.1 Fair value estimation

The table below presents financial instruments carried at fair value, by valuation method. The different levels have been defined as follows:

- Level 1: The fair value of financial instruments is based on closing price and net asset value quoted in an active market for the same asset or liability and the Company has access to that market at the measurement date.
- Level 2: The fair value of financial instruments is measured using valuation techniques that use materially observable inputs and rely as little as possible on the company's own estimates.
- Level 3: The fair value of financial instruments is measured using valuation techniques that are not based on observable market data.

The following table presents the Company's financial assets and liabilities that are measured at fair value by level as of 30 September 2025 and 31 December 2024.

	(Unaudited) 30 September 2025			Total Baht

Financial liabilities				
Investment contract liabilities	48,840	-	-	48,840
Total	48,840	-	-	48,840

There were no significant inter-level transfers during the period.

6.2 Valuation techniques used to measure fair value level 1

The fair value of financial instruments traded in an active market is based on the closing price and net asset value on the financial statement date from the Stock Exchange of Thailand.

6.3 Valuation techniques used to measure fair value level 2

Investments in debt instruments whose fair value is at level 2 are measured at fair value using the yield curve of the Thai Bond Market Association on the last business day of the financial statement date.

7 Components of statement of financial position

The analysis of amounts presented in the financial statements for insurance contracts as of 30 September 2025 and 31 December 2024 is presented in the following table.
